DuPont™ Pyralux® AP

flexible circuit materials

Technical Data Sheet

Description

DuPont™ Pyralux® AP flexible circuit material is a double-sided, copper-clad laminate and an all-polyimide composite of polyimide film bonded to copper foil. This material system is ideal for multilayer flex and rigid flex applications which require advanced material performance, temperature resistance, and high reliability.

Offered in a full range of dielectric thicknesses, DuPont™ Pyralux® AP flexible circuit materials provide designers, fabricators, and assemblers a versatile option for a wide variety of flexible circuit constructions.

- Low CTE for rigid flex multilayers
- Excellent thermal resistance
- Thin Cu-clads with superior handling
- Unique thick-core product for controlled impedance
- Excellent dielectric thickness tolerance/electrical performance
- High Cu-polyimide adhesion strength
- Full compatibility with PWB industry processes, IPC 4204/11 certified
- UL 94V-0, UL 796, 180°C (356°F) max. operating temperature

AP 9151R	5.0	35 (1.0)
AP 9252R	5.0	70 (2.0)
AP 8565R	6.0	18 (0.5)
AP 9161R	6.0	35 (1.0)
AP 9262R	6.0	70 (2.0)

Add "R" to the end of the code to specify rolled-annealed copper foil (e.g., AP 9121R). Add "E" to the end of the code to specify electrodeposited copper foil (e.g., AP 9121E). If rolled-annealed double-treat copper foil is specified, add the letter "D" to the end of the product code (e.g., AP 9121D).

*Additional balanced/unbalanced copper constructions and dielectrics (>6 mil) are available through your DuPont Representative.

**Available in ED copper only

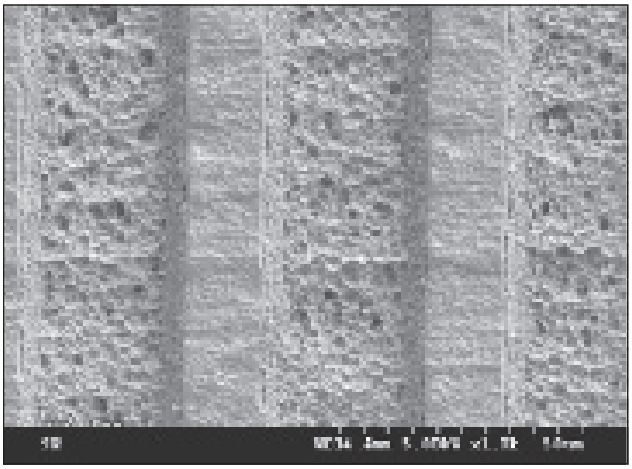
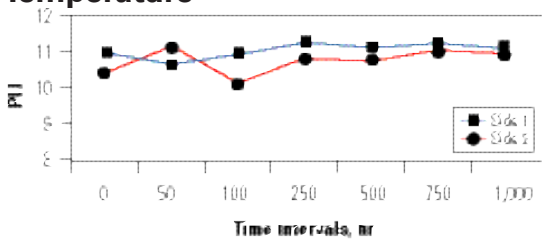
A Thin High-Performance Sheet Clad Laminate for High Density Flex Circuits



Double sided 1 mil DuPont™ Pyralux® AP flexible circuit materials were developed for high-reliability flexible circuit applications requiring thin dielectric profiles and superior performance offered by its all-polyimide construction. The high material modulus provides excellent handling characteristics in a thin adhesiveless laminate. All 1 mil DuPont™ Pyralux® AP flexible circuit materials constructions are UL rated and fully certified to IPC-4204/11. 1 mil DuPont™ Pyralux® AP flexible circuit materials features:

- 1.0 mil adhesiveless core dielectric with excellent thickness uniformity for consistent electrical performance
- High adhesion strengths and uniform performance profiles
- Excellent long-term thermal exposure performance (Figure 1) and harsh environment

Figure 1. 150°C (302°F) Continuous Temperature



The Flagship All-Polyimide Flexible Composite

2 mil DuPont™ Pyralux® AP flexible circuit materials adhesiveless laminate is ideal for double sided, multilayer flex as well as rigid flex applications requiring advanced material performance and high reliability. All-polyimide constructions enable designers, fabricators, and assemblers to achieve higher density, premium performance flexible circuitry. 2 mil DuPont™ Pyralux® AP supports advanced circuit designs through its core polyimide chemistry strengths:

- Low thermal expansion coefficient for rigid flex fabrication and assembly
- Excellent thermal resistance to high-temperature assembly
- Good dimensional stability consistency
- Superior mechanical and electrical properties and compatibility with severe environment applications

2 mil DuPont™ Pyralux® AP flexible circuit materials are fully compatible with existing PCB processes and material handling systems. A double-treat RA copper offering provides the fabricator a unique construction to minimize surface preparation costs and increase overall final yields.

A New Alternative for High Frequency and Controlled Impedance Design

DuPont™ Pyralux® AP flexible circuit material is the first all-polyimide flexible circuit material to be offered in dielectric core constructions of 3–6 mils and greater. These clads provide designers and fabricators new options in building high reliability/high yield circuits for controlled impedance and high frequency applications.

Among its application advantages, DuPont™ Pyralux® AP flexible circuit materials offer:

- Greater production yields and flexibility in controlled impedance applications for unique DuPont™ Pyralux® AP core dielectric thickness
- Excellent dielectric thickness tolerance for consistent electrical performance
- Full mechanical/electrical benefits of DuPont™ Pyralux® AP adhesives material in double-sided multilayer and rigid flex applications.

All DuPont™ Pyralux® AP flexible circuit materials products are fully certified to IPC-4204/11.

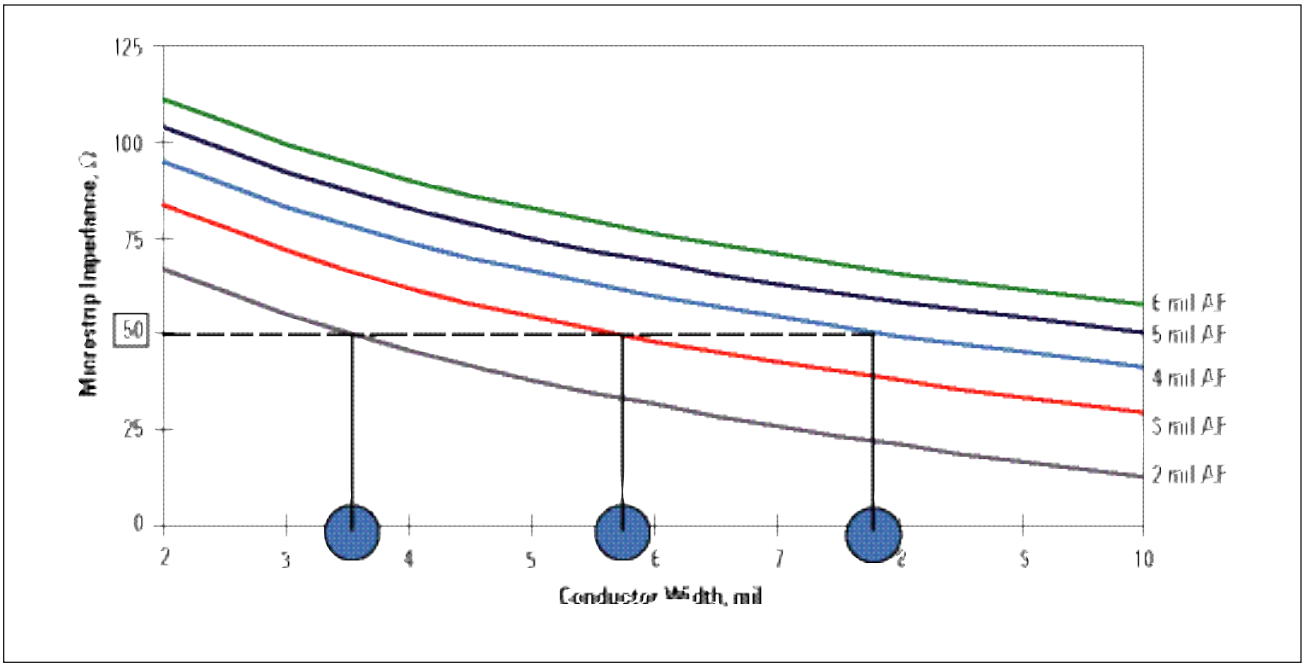
*1 oz RA constructions. Additional copper/dielectric constructions availble on request.

Figure 8 illustrates the fabrication benefits of thick DuPont™ Pyralux® AP flexible circuit materials core (vs. standard 2 mil) in a nominal 50 y impedance microstrip circuit. Copper traces with 2x greater line/space resolution can be used to achieve identical electrical performance while greatly reducing fabrication yield loss from fine line imaging.

In addition to enhanced dielectric thickness, DuPont™ Pyralux® AP flexible circuit materials retain the superior inherent material advantages of adhesiveless laminate for double-sided multilayer flex, as well as rigid-flex applications. The following contribute to DuPont™ Pyralux® AP's advanced performance and high reliability:

- Low thermal expansion coefficient providing better compatibility with Cu and higher rigid-flex fabrication yields
- Consistent dimensional stability
- Excellent adhesion of copper to dielectric
- Superior thermal resistance for high temperature applications and assembly processes
- Good compatibility with all flexible circuit processing and handling systems

Figure 8. Yield Benefits of DuPont™ Pyralux® AP Laminate in Controlled Impedance Microstrip Design



DuPont™ Pyralux® AP flexible circuit materials Processing

DuPont™ Pyralux® AP flexible circuit materials copper clad handling and processing requirements are identical to standard 2 mil DuPont™ Pyralux® AP clads. They are fully compatible with all conventional flexible circuit fabrication processes including oxide treatment and wet chemical plated-through-hole desmearing. Fabricated circuits can be cover coated and laminated together to form multilayers or bonded to heat sinks using polyimide, acrylic, or epoxy adhesives.

General Information

Quality and Traceability

DuPont™ Pyralux® AP flexible circuit material copper clads are manufactured under a quality system registered to ISO9002 by Underwriters Laboratories. The clads are certified to IPC-4204/11. Complete material and manufacturing records, which include archive samples of finished product, are maintained by DuPont. Each manufactured lot is identified for reference and traceability. The packaging label serves as the primary tracking mechanism in the event of customer inquiry and includes the product name, batch number, size, and quantity.

Storage Conditions and Warranty

DuPont™ Pyralux® AP flexible circuit material laminates should be stored in the original packaging at temperatures of 4-29°C (40-85°F) and below 70% humidity. The product should not be frozen and should be kept dry, clean and well protected. Subject to compliance with the foregoing handling and storage recommendations, the DuPont warranty, as provided in the DuPont Standard Conditions of Sale, shall remain in effect for a period of two years following the date of shipment.

Safe Handling

Anyone handling DuPont™ Pyralux® AP flexible circuit materials should wash their hands with soap before eating, smoking, or using restroom facilities. Although DuPont is not aware of anyone developing contact dermatitis when using DuPont™ Pyralux® AP products, some individuals may be more sensitive than others. Gloves, finger cots, and finger pads should be changed daily.

DuPont™ Pyralux® AP flexible circuit materials are fully cured when delivered. However, lamination areas should be well ventilated with a fresh air supply to avoid build-up from trace quantities of residual solvent (typical of polyimides) that may volatilize during press lamination. When drilling or routing parts made with DuPont™ Pyralux® AP, provide adequate vacuum around the drill to minimize worker exposure to generated dust.

As with all thin, copper-clad laminates, sharp edges present a potential hazard during handling. All personnel involved in handling Pyralux® AP clads should use suitable gloves to minimize potential cuts.

Packaging

DuPont™ Pyralux® AP flexible circuit materials copper clad laminate is supplied in the following standard sheet sizes:

24″ x 36″ (610 mm x 914 mm)
24″ x 18″ (610 mm x 457 mm)
24″ x 12″ (610 mm x 305 mm)
12″ x 18″ (305 mm x 457 mm)

All DuPont™ Pyralux® AP packaging materials are 100% recyclable.
