Action Item Request

Item No. PAY-???

Originator/ Organization/Phone #: Nigel Angold / ISIS / 818-419-3542

Area of Concern/ Presenter: Item not discussed in review.

The ISIS team requested a requirement that there be no line of sight between any thruster and any instrument aperture. This request was accepted. However, the requirement was neither added nor reviewed because there is a spacecraft requirement that thruster plumes will not impinge on any instrument field of view. Nevertheless, the ISIS team needs to be sure the plume impingement requirement meets the intent of its originally requested line of sight requirement and therefore considers this issue to be an open item.

Action/ Recommendation/ Concern:

This AIR is submitted to document the fact that the above item is still under discussion.
